

ABHISHEK SHUKLA

Data Engineer | SQL Specialist | Azure | Data Warehousing & Modeling
abhishukla093@gmail.com | 9288483477 | linkedin.com/in/abhishek-shukla093 | Noida,

India PROFESSIONAL SUMMARY

Data Engineer with **6+ years of SQL development** and **4+ years in Azure Data Factory and Data Warehousing**. Expert in designing enterprise-grade **ETL/ELT pipelines**, dimensional data models (**Star Schema, Snowflake Schema, Data Vault**) and **Kimball methodology**-based warehouses. Hands-on with **Python** for data processing/scripting, **Google BigQuery (GCP)** for cloud-based analytics, and **Power BI** for dashboarding and reporting. Proven in cloud modernization, performance optimization, and delivering scalable analytical solutions.

TECHNICAL SKILLS

- **Cloud Platforms:** Azure Data Factory (ADF), Databricks, Azure Blob Storage, ADLS Gen2, Azure SQL Database, **Google BigQuery (GCP)**
- **Data Warehousing & Modeling:** Dimensional Modeling, Conceptual / Logical / Physical Data Modeling, Star Schema, Snowflake Schema, Data Vault, Kimball Methodology, Fact & Dimension Tables, SCD Type 1/2/3, Slowly Changing Dimensions, Schema Design, ERD
- **Languages & Databases:** SQL, T-SQL, PL/SQL, SQL Server, MySQL, Azure SQL, **Python ,Pyspark**
- **ETL/ELT & Performance:** SSIS, CDC (Change Data Capture), Query Tuning, Indexing, Partitioning, Columnstore Indexes
- **BI & Visualization:** **Power BI – Basic**

PROFESSIONAL EXPERIENCE

Data Engineer — RBL Bank | Noida, India | July 2024 – November 2025

- Engineered enterprise-grade **ETL/ELT pipelines** using **Azure Data Factory (ADF)** and **Azure Synapse Analytics**, enabling near real-time analytics for business stakeholders.
- Designed and implemented data warehouse models using **Star Schema** and **Snowflake Schema** aligned to **Kimball Methodology**, with Fact Tables, Dimension Tables, and **SCD Type 1, Type 2, and Type 3** for complete historical tracking.
- Integrated multiple banking systems and third-party APIs into **Azure Data Lake Storage Gen2 (ADLS Gen2)** using parameterized, scheduled ADF pipelines.
- Implemented incremental data loading patterns using watermark columns and **Change Data Capture (CDC)** to optimize pipeline performance.
- Optimized **Azure Synapse Analytics** dedicated SQL pools with distribution strategies, partitioning, **columnstore indexes**, and materialized views for analytical workload performance.
- Built reusable, parameterized ADF pipelines with lookup, copy, and dataflow activities for multi-environment deployments; developed complex **T-SQL** stored procedures, views, and functions for business logic.
- Used **Python** scripts for ad-hoc data validation and automation tasks supporting pipeline monitoring.
- Established automated data quality monitoring, alerting frameworks, and pipeline dashboards in Azure Portal tracking execution status and data lineage.
- Led cloud migration of legacy ETL processes to Azure with zero downtime, reducing end-to-end processing time significantly.

Consultant — Uneecops Technologies Ltd. | Noida, India | September 2021 – November 2023

- Developed pipelines using **Azure Data Factory**, consolidating source systems into a centralized data warehouse using **Star Schema** and **Snowflake Schema** dimensional models.
- Designed and modified Fact and Dimension Tables to support evolving analytical needs, historical data retention, and **SCD** requirements across client projects.
- Optimized **SQL** stored procedures and queries using indexing strategies, partitioning, and execution plan tuning; implemented CTEs and window functions for large dataset transformations.
- Built reusable SQL scripts and data warehouse templates accelerating **Power BI** / BI reporting enhancements; created dynamic SQL procedures supporting multiple client configurations.
- Collaborated with business analysts to translate requirements into data models and technical specifications; maintained data validation frameworks ensuring integrity across staging and production.

SQL Developer — Statcon Energia Pvt Ltd. | Noida, India | March 2021 – August 2021

- Designed normalized (3NF) and denormalized database schemas for financial reporting; implemented ACID-compliant transaction management and error handling in stored procedures.
- Performed index tuning, execution plan analysis, and query optimization; developed **SQL**-based data migration scripts for platform upgrades with zero data loss.
- Built automated alerting mechanisms using SQL Server Agent jobs and validation checks; mentored junior developers on SQL best practices.

SQL Developer — Cogniscent Business Solutions | Noida, India | April 2018 – June 2020

- Designed **SQL Server** databases supporting high-volume financial transactions; developed complex stored procedures, triggers, and user-defined functions for reusable business logic.
- Built denormalized reporting structures alongside normalized schemas; implemented data migration scripts and database backup/recovery strategies ensuring business continuity.
- Conducted code reviews and mentored junior developers on SQL optimization techniques and database design best practices.

KEY ACHIEVEMENTS

- Reduced data latency from hours to minutes for critical business dashboards using **ADF**-based incremental loading and **Synapse** optimization.
- Led end-to-end cloud migration of legacy ETL workflows to Azure with zero downtime and improved pipeline reliability.
- Designed and delivered multiple production-grade data warehouse implementations using **Kimball methodology** and dimensional modeling.
- Mentored junior engineers and established data engineering best practices, improving team velocity and code quality.

EDUCATION

Master of Computer Applications (MCA) — G L Bajaj Institute of Technology and Management | 2015 – 2017
