

Abhishek Shukla

Data Engineer • Data & AI • Analytics • Product / Requirements

India | Email: your.email@example.com | LinkedIn: linkedin.com/in/your-profile | GitHub: github.com/yourusername

PROFESSIONAL SUMMARY

Data engineering and data/AI-focused professional with experience-oriented skills across Python, SQL, ETL/ELT, distributed data processing, data quality, analytics, product requirements and AI evaluation workflows. Strong focus on translating business problems into structured data pipelines, measurable requirements, reliable datasets and decision-support solutions.

DATA ENGINEERING SKILLS

- Programming: Python, SQL, scripting, data transformation, validation and automation.
- Data Engineering: ETL/ELT, batch processing, incremental loads, data ingestion, schema validation, CDC concepts and pipeline monitoring.
- Big Data: Apache Spark, PySpark, distributed processing, partitioning, joins and large-scale transformations.
- Databricks / Lakehouse: Databricks workflows and notebooks, Spark-based engineering, lakehouse architecture and Delta-style data concepts.
- Orchestration: Apache Airflow concepts, DAGs, dependencies, scheduling, retries, backfills and failure handling.
- Transformation & Modeling: dbt concepts, dimensional modeling, fact/dimension schemas, staging layers, data tests and documentation.
- Cloud & Storage: AWS, Azure and GCP data-platform concepts; cloud storage, compute, managed services and IAM fundamentals.
- Warehousing: Snowflake, BigQuery and modern warehouse/lake architectures; performance, partitioning and analytics-ready datasets.
- Streaming: Kafka/event-driven architecture concepts, producers/consumers and streaming pipeline fundamentals.
- DevOps: Git, Docker, CI/CD concepts, environment management, automated testing and reproducible deployment workflows.
- Data Quality & Observability: completeness, uniqueness, validity, freshness, reconciliation, anomaly checks, lineage, logging and monitoring.
- Analytics: KPI design, reporting datasets, dashboards, business metrics and stakeholder-facing insights.

AI / OUTLIER-RELEVANT WORK

- AI response evaluation: reviewed generated outputs for correctness, relevance, completeness, instruction following and overall quality against task-specific criteria.
- Structured data annotation and labeling: worked with guideline-driven labeling/review workflows where consistency and accuracy are critical to dataset quality.
- Quality review and error analysis: identified output defects, edge cases and recurring error patterns and applied evaluation criteria consistently.
- Prompt/task assessment: assessed whether AI-generated outputs satisfied the intended prompt, constraints and expected response behavior.
- Human-in-the-loop AI: familiar with review workflows where human judgment validates or corrects model-generated outputs before they are accepted.

SELECTED PRODUCT / DATA PROJECTS

StockSense AI — Inventory Forecasting & Replenishment

Designed a detailed PRD covering data ingestion, inventory modeling, demand forecasting, replenishment calculations, supplier constraints, exception management, purchase planning, AI/ML governance, testing and rollout.

SupportPilot AI — Customer Support Platform

Defined requirements for ticket ingestion, classification, routing, AI summaries, knowledge retrieval, suggested responses, SLA management, workflow automation, security and auditability.

Data Quality Workflow

Defined validation, freshness, anomaly detection, failed-import handling and remediation workflows for operational data pipelines.

Operations KPI Framework

Structured business metrics, reporting datasets, dashboard requirements, exception queues and measurable operational outcomes.

PRODUCT & ANALYTICS CAPABILITIES

- Product requirements documents (PRDs), functional and non-functional requirements, user stories and acceptance criteria.
- Data-driven workflow design, KPI frameworks, dashboards, reporting requirements and operational exception management.
- AI-assisted product design, model evaluation concepts, human-in-the-loop workflows, governance and auditability.
- Stakeholder-oriented documentation that connects business goals, data requirements, workflows, metrics and implementation constraints.

EDUCATION & CERTIFICATIONS

Add your highest qualification, university/institute, graduation year and any completed certifications here. Only completed certifications should be listed.

TOOLS / TECHNOLOGIES

Python • SQL • PySpark • Apache Spark • Databricks • Airflow • dbt • Snowflake • BigQuery • AWS • Azure • GCP • Kafka • Docker • Git • CI/CD • Data Quality • ETL/ELT • Data Warehousing • Data Lakes/Lakehouse • Analytics

NOTE

Replace the placeholder contact details and add verified employment, education, dates and completed certifications before sending this resume to employers.
